

AT GLASS & ALUMINIUM

PRODUCT CARE BROCHURE

***SHOWER SCREENS, MIRRORS, SLIDING ROBE
DOORS & SPLASHBACKS***

General:

- Avoid abrasive materials such as steel wool, hard bristle scrubbing brushes etc and use only a soft cloth or damp sponge.
- Regular Cleaning should be undertaken to maintain your products new condition.

Shower Screens:

- It is recommended to wipe your shower screen down after every use. Squeegee the glass and dry the aluminium frame and hardware to minimise water spots and mineral deposits.
- Use only warm mild soapy water which is PH neutral.
- Never use cleaners containing abrasives, ammonia, bleach, acids, waxes, alcohol or solvents as they may damage the finish.
- Rinse all surfaces thoroughly to ensure no cleaning product residue remains as these could cause permanent marking.
- Always maintain a dry well-ventilated bathroom.

Mirrors:

- It is recommended to use only PH neutral cleaning products with a soft cloth or sponge to remove any marks or debris from the surface of the mirror. If any spray cleaners are used, please ensure all product residue is removed after cleaning to avoid being trapped between mirror frames or edge work as this may cause damage or corrosion.

Sliding Robe Doors:

- Please follow the Shower Screen & Mirror care instructions when cleaning your Glass, Vinyl or Polytec Board Door finishes.
- The Aluminium around the Robe Doors should be wiped down if needed and bottom robe tracks carefully vacuumed with a soft brush head to remove all sand, dust and debris to ensure wheels and rollers continue to operate efficiently.

Splashbacks:

- Wipe down glass surfaces with soft cloth & PH neutral cleaning products to remove any fat or grease build ups.
